

# OP ALERT

## FULL TIME SURVEILLANCE WITH OPMON

The **OpAlert** module provides enhanced security and reliability to the **OpMon** solution. With it, in the event of any problems, you can **receive alerts** via SMS - cell-phone text messages. It can even be used by management to receive alerts about sales targets, production lines failures, and alerts for the indicators generated by BSC, PMI, ITIL, COBIT, ISO, that fail to reach the level determined by the organization. As it is not dependent on network infrastructure or the Internet, **OpAlert** guarantees coverage even if there is failure in the systems.

## HOW IT WORKS

**OpAlert** is an **Opservices** solution and only needs a GSM modem (supplied by the customer). The message traffic is spooled, which allows out-of-band emission.

With **OpAlert** interactive applications can be created to enable the user to respond to alerts via SMS, interacting directly with **OpMon** by phone.

### GSM Modem Models compatible with OpAlert:

- Huawei E1692 USB Modem
- Huawei E1756 USB Modem
- Huawei E156 USB Modem
- Huawei E220 USB Modem
- Huawei E226 USB Modem
- Huawei E270 USB Modem
- Huawei E620 USB Modem
